

Connect your account and keep building

If the connection button is missing in chat, follow these steps. Gmail is the example for setup, account selection and checking access.

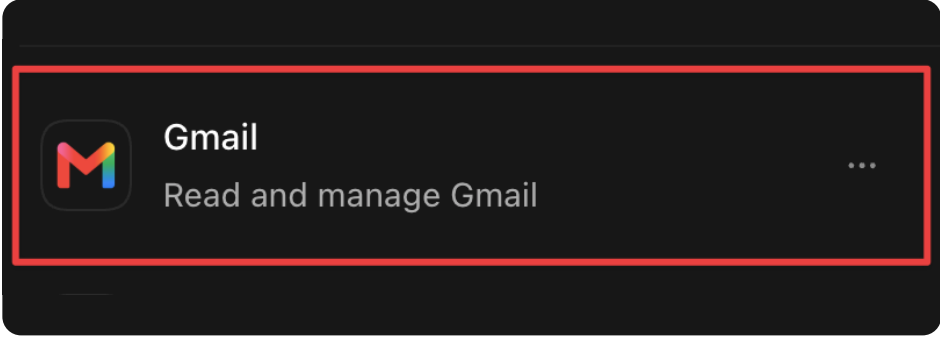

1 Open Plugins

Click Plugins in the Codex sidebar.

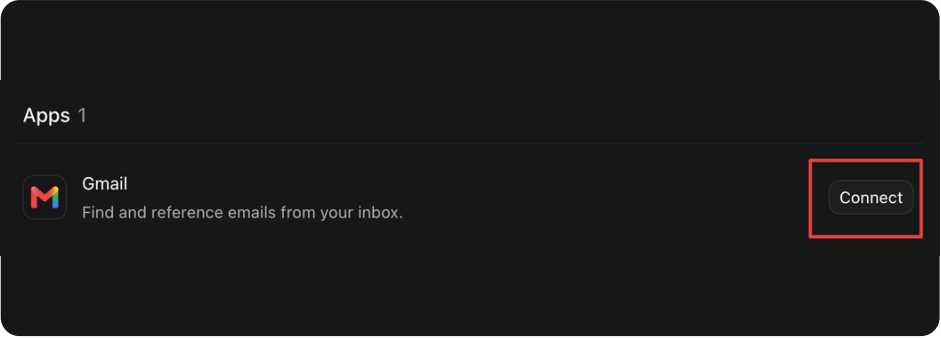

2 Find your app

Search for Gmail or open its card. If it is already installed, do not reinstall it.

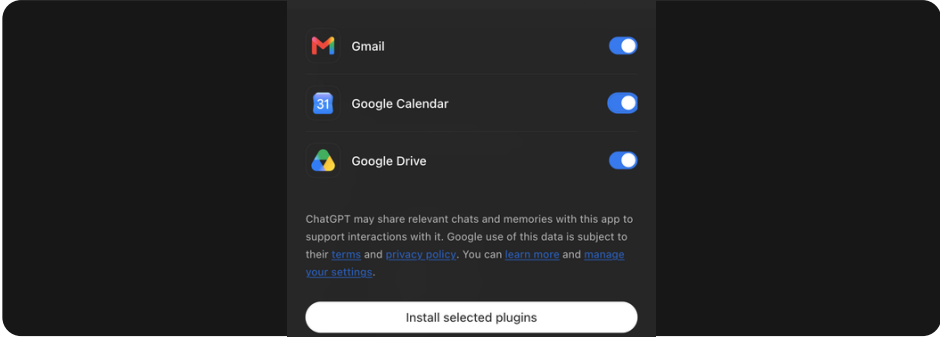

3 Use Connect under Apps

On the Gmail details page, use Apps → Gmail → Connect. The “Try now” button above does something different.

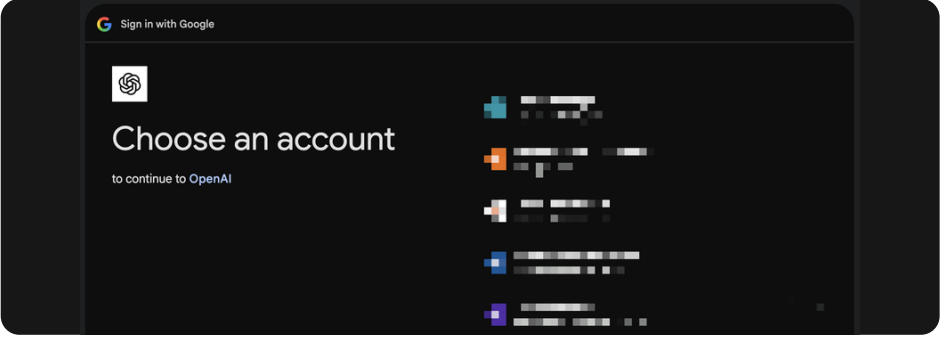

4 Select the services you need

If this screen appears, select the services you need and click Install selected plugins.

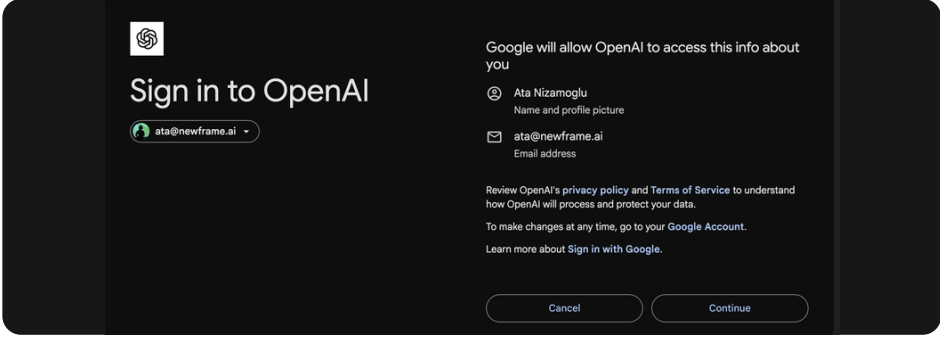

5 Choose your Google account

On Choose an account, select the account you want to use for the workshop.

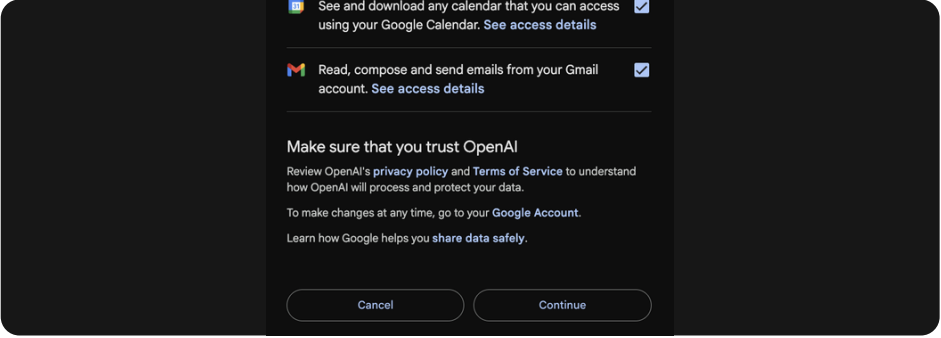

6 Check the account

On Sign in to OpenAI, check the selected account. If it is correct, click Continue.

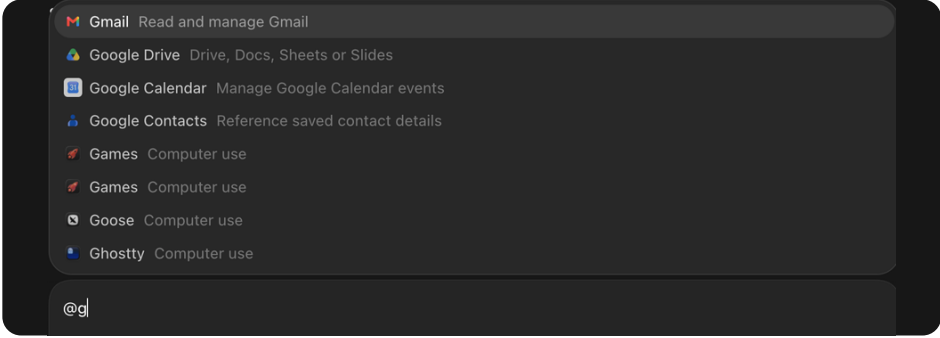

7 Review the permissions

Read the requested permissions. Approve the access you want to grant, then click Continue.

8 Return to chat and check access

Select @Gmail and send the prompt below. An app appearing in the list does not prove that the connection works.

SEND IN CHAT

“Check my Gmail connection and tell me which account is connected. Do not read my emails yet.”

Stuck? Open a new chat and check again. If the connection still fails, use the example data. Slack: Plugins → Slack → Apps → Connect.
